

AWS Organisational Well-Architected Reports

To maximize value from Kaizen's AWS investments, software and infrastructure architecture teams should regularly lead **Well-Architected Reviews (WARs)**. There are two types:

1. **AWS Estate Review:** Uses tools like **AWS Trusted Advisor** to scan the infrastructure against AWS best practices in:
 - Security
 - Fault Tolerance
 - Performance Efficiency
 - Cost Optimization
 - Service Quotas
2. **Workload-Specific Review:** Audits a specific workload in-depth against the **six Well-Architected pillars**:
 - Operational Excellence
 - Security
 - Reliability
 - Performance Efficiency
 - Cost Optimization
 - Sustainability

In workload reviews, domain experts provide insights through interviews, applying various lenses and leveraging tools to ensure adherence to best practices.

Outcomes of a Well-Architected Review:

- **Risk Identification:** High, medium, and low-risk areas highlighted.
- **Improvement Plan:** Concrete recommendations for aligning with best practices.
- **Prioritized Actions:** Focused roadmap for the most impactful changes.
- **Operational Gains:** Opportunities for automation and process optimization.

Regular WARs ensure AWS workloads are secure, scalable, cost-effective, and aligned with evolving needs.

This objective of the documentation is to provide a runbook on how the AWS Estate review is conducted.
