

Running AWS Trusted Advisor from a Master Account

This runbook provides a step-by-step guide to running AWS Trusted Advisor from a master account in an AWS Organization. Trusted Advisor helps monitor and optimize AWS infrastructure against best practices in security, cost, fault tolerance, performance, and service quotas.

Pre-requisites [🔗](#)

1. Master Account Setup:

- Ensure the account is the management account in AWS Organizations.
- Verify appropriate permissions to access and run Trusted Advisor checks.
- Trusted Advisor is included in **Business** or **Enterprise Support Plans**.

2. Enable Trusted Advisor Organizational View (Optional):

- Ensure the **Trusted Advisor Organizational View** is enabled in your organization for multi-account visibility.

3. IAM Role/Policy Requirements:

- Attach the `AWSTrustedAdvisorServiceRolePolicy` to the IAM role or user running Trusted Advisor.
-

Steps to Run Trusted Advisor [🔗](#)

Steps to Run Trusted Advisor [🔗](#)

1. Log into the Master Account

- Sign in to the AWS Management Console using the master account credentials.

2. Access Trusted Advisor

- Navigate to the Trusted Advisor dashboard:
 - Open the AWS Management Console.
 - Go to Search Bar to enter Trusted Advisor.

3. Create a Report (see attached page)

- Configure the report settings:
 - Report Name: Assign a descriptive name to the report.
 - Review Categories: Select from the five main categories:
 - Security
 - Fault Tolerance
 - Performance Efficiency
 - Cost Optimization

- Service Quotas
 - Output Format: Choose between JSON or CSV.
 - Regions: Specify the region(s) for the report.
 - Check Categories: Select all categories or specific checks as required.
 - Check Refresh: Choose to refresh all checks or disable updates if not needed.
 - Resource Status: Filter by resource status (e.g., OK, Warning, Error, Not Applicable).
 - AWS Organization: Include all linked accounts or specify individual ones.
 - Click Create Report.
4. **Download the Report (Optional)**
- Export the results for further analysis:
 - Click Export and choose CSV or JSON format for a detailed report of all checks.
